What Is Medical Abortion?

Medical Abortion is a process where you don't have to go for surgical termination procedure. This process can be done before completing 9-11 weeks of gestation. It is safe and secure solution to get rid of unwanted pregnancy at home.

Is A Medical Abortion Safe?

Yes, it is secure. A woman may become pregnant again soon after her previous pregnancy ends. If a woman who has had a pregnancy terminated does not wish to become pregnant again, she should begin taking safety steps immediately after the pregnancy ends. Any queries a woman may have should be directed to her healthcare providers.

About Mifeprex

- This pregnancy termination pill was first approved by the FDA in 2000.
- It is used in combined with another tablet known as Misoprostol to terminate an early pregnancy.
- The agency determined that it is both safe and effective when used to end a pregnancy in accordance with the revised labelling after reviewing the additional application.

How It Helps To Terminate Early Pregnancy?

- This pill is working as anti- progesterone.
- It helps to stop the production of the progesterone hormone, that is required for being pregnant.

When You Can Take This Pill?

- This Abortion Pills need to be taken earlier than 7 weeks of being pregnant.
- If you are more than seven weeks pregnant then you have to take another pill of Misoprostol.
- It is effective method of medical abortion.

Who Should Not Take This Pill?

A women should not take this pill if it has been more than 70 days since the first day of her last menstrual period or if she:

- Has an ectopic pregnancy.
- Has problems with the adrenal glands.
- Is currently being treated with long term corticosteroid therapy
- Has had an allergic reaction to Mifepristone, Misoprostol or similar tablets.
- Has bleeding problems or is taking anticoagulant products.
